DETAILED ACTION

Allowable Subject Matter

1. Claims 1-3 are allowed over the prior art.
2. The following is an examiner's statement of reasons for allowance: Regarding claim 1, the prior art does not disclose a toy device having a first and second member rotatable relative to one another and a controller monitoring relative angular position of the first and second rotary members with respect to one another, a rotary feedback mechanism having a first set of three separate electrically conductive pads non-rotatably mounted to the first member, a wiper non-rotatably mounted to the second member abutting the first set of conductive pads so as to sequentially contact at least some of the first conductive pads with rotation of the first and second members with respect to one another, an individual signal conductor from each of the three conductive pads to the controller to provide the controller with one or more of a plurality of the commonly provided signals from each of the separate conductive pads contacted by the wiper, the controller associating each signal of the plurality of signals with an individual electric pad to identify each particular pad being contacted by the wiper at any given time such that the relative angular position of the first and second members with respect to one another is determined by the controller from the commonly provided signals fed back to the controller by each particular conductive pad of the plurality. Yamaskai (US Patent 6,315,630 B1) discloses first and second members rotatable relative to one another, but does not disclose the rotary feedback mechanism associated with the toy to determine a plurality of different positions of the upper body portion/first member relative to the lower body portion/second member.
